EnergiOS | Carbon and Energy Report

Illustrative facility profile derived from BDG2

Building: The Garden Kitchen
Source window: 2017-12-31T00:00:00 to 2017-12-31T23:00:00
Source timezone: US/Central

Demo whole-building electricity estimate:

Energy: 586.71 kWh
Peak interval-average demand: 37.16 kW
Estimated cost: MYR 293.35
Estimated emissions: 322.69 kg CO2e
Selected-period BEI: 0.32 kWh/m2 (not annual)

Separate next-24-hour forecast / approved demo plan:

Forecast energy: 608.87 kWh
Projected energy reduction: 13.40 kWh
Projected grid energy avoided: 13.40 kWh
Projected cost savings: MYR 6.70
Projected peak reduction: 0.72 kW
Projected avoided emissions: 7.37 kg CO2e

Calculation assumptions:

Flat demo tariff: 0.50 MYR/kWh
Demo carbon factor: 0.55 kg CO2e/kWh
Source: Nexora township v1 illustrative profile; hypothetical tariff, carbon factor and equipment inputs.

Local demo only. No physical equipment control or verified savings.
No corporate-site identity, floor telemetry or verified saving is claimed.

Alert approvals:

Ground / Dining room: Cooling an unoccupied zone - settled
Roof / HVAC plant: High supply temperature - settled
